(54) **AUDIO DISK AND ENCODING DEVICE,
DECODING DEVICE FOR AUDIO DATA AND
COPY MANAGING METHOD**

(57) Abstract:

PROBLEM TO BE SOLVED: To make the copy protection to be performed surely in the case of transmitting the audio data of a PCM system and high-quality audio data of a one-bit stream system.

SOLUTION: In a copy management data embedding part, levels of one-bit stream data B and PCM stream data are detected and copy management data are embedded in them and a copy management data supplying part 100b is controlled so as to respectively supply copy management data B, A to FM modulator 114B, 114A, by a control signal (a) and a spreading code generator 117 is controlled so as to generate a spreading code by a control signal (b) and a switch 201 is controlled by a control signal (c) so that both data are inaudible even when they are subjected to D/A conversions. Here, CGMCAPS (Copy Generation Management Control Audio Protection System) codes express-

ing a reproduction inhibition/permission, a copy inhibition/permission are used as the copy management data B, A.
